## Summary

*Fastidious, meticulous, eloquent software engineer with focus on software architecture and systems engineering.*

Started to work in a IT consultancy company in 2003 as a Network Administrator. Working with computer networks in Windows and Linux environments I thought that I could start my own business. In 2004, I started a small business to help companies with their IT infrastructure, not only the network infrastructure but all IT aspects.

In 2007 I joined the CEFET/RJ university where I graduated in 2011 in Internet Systems with honors.

During my college studies I closed my business and joined Target Solutions Professional services to work full time. At this point, I was working with open source technologies on a daily basis, and I loved it! At Target Solutions, I worked as an outsourced employee at Alcatel-Lucent Technologies and at Oi (the biggest ISP in Brazil).

In those companies I worked in teams of different sizes, with different responsibilities in several projects. I worked in large scale projects like network troubleshooting tools, fraud detection and users information management to be used by the government judiciary.

In 2011 I decided to move to Germany to study at TU Dresden where I obtained my master degree in Distributed Systems Engineering. While living in Dresden I worked for two companies as a software architect and operations. At Exelonix we developed a custom Android and smart home devices for elderly people. I worked developing the platform infrastructure and managing the company's internal tools.

Upon my graduation I'm keen to work in a company which values creativity and innovation. That also provides a conducive environment for using open sources technologies and contributing to the community.

---

## Experience

### Exelonix GmbH

#### Software Engineer & DevOps

DRESDEN, GERMANY

*Aug '14 – present*

Exelonix is a company focused on improving the quality of life for the elderly. The main product is the **Asina Tablet**, which has a custom android version. They also produce smart house appliances and health monitoring appliances. Here I worked as a full stack developer producing the **Asina Tablet** website using Python and **wagtail**. I also created a simple e-commerce plugin for wagtail to sell their products on-line. Developed a newsletter tool in Django to manage and track their newsletter. My roles also included research, installation, configuration and management of several supporting tools like Icinga, Nagios, Jenkins. Enforcing the platform security using IPSec VPN **strongSwan** and creating own public key infrastructure (PKI). Joined Cebit and IFA congresses for the product promotion.

**Technologies Used:** Java, Java Portlets, Python, Fabric, PostgreSQL, Django, Wagtail, Redis, Nginx, Apache, LDAP, Liferay, Linux, IPSec, OpenSSH, Mercurial.

### Inquence GmbH

#### Software Developer

DRESDEN, GERMANY

*Apr '13 – Jul '14*

Inquence GmbH is a company focused on Content Management Systems that provides dynamic search and integration with third-party applications. The product included a web platform and a client machine to be added at the customer network. All documents from the user would be available anywhere at anytime. At Inquence my responsibilities includes requirement gathering, implementation and testing of new features and management of legacy code. I was also in charge of orchestration and maintenance of the clients and the platform updates.

**Technologies Used:** Java, Python, Fabric, Ansible, MySQL, Linux, Git, PHP.

### Target Solutions

#### Software Developer

RIO DE JANEIRO (RJ), BRAZIL

*Jan '09 – Dec '11*

Target solutions is a professional service consultancy company that provides outsourced specialists and software development. When I joined Target Solutions I was on delegation to Alcatel-Lucent Technologies to help their development team. In Alcatel-Lucent I worked developing a user troubleshooting and fraud detection tool for the main ISP company in Brazil. Later, I was reassigned to work in a project to troubleshoot the ISP backbone. After that, I joined another team to develop a tool to record the user connection information to be used by the Brazilian judiciary to identify the user subscribers.

**Technologies Used:** Java, Maven, Spring, Hibernate, Struts, EJB, SNMP, Corba, JAX-WS, Selenium, JUnit, Aspect4J, MySQL Server, Subversion, Linux, Solaris.

## Nanoinfo

RIO DE JANEIRO (RJ), BRAZIL

### Founder

Nov '04 – Jan '09

Nanoinfo was my private company where I provide IT consultancy for other business. At Nanoinfo I worked for several costumers from different sectors providing all types of consultancy. The consultancy included installation of the network infrastructure including the setup of windows server or linux server to manage the users, computers, printers with Active Directory or Samba, configuration and management of system shares, mail server (MS exchange), phone gateways (Asterix), firewalls (ISA Server or pfSense).

**Technologies Used:** Windows 2003 Server, Windows XP, Linux, Active Directory, Samba, NFS, DHCP, DNS, Microsoft Exchange Server, Microsoft ISA server, pfSense, Asterix.

*Please refer to my [LinkedIn](#) profile for complete reference and recommendations.*

---

## Education

Technische Universität Dresden

DRESDEN, GERMANY

### Master of Science, Distributed Systems Engineering

2012 – 2016

Completed courses in Security and Cryptography, Software Fault Tolerance, Distributed Operating Systems and Real-Time Systems besides the mandatory courses. Also worked in the Software Fault Tolerance Lab. Under the guidance of Prof. Dr. rer. nat. habil. Uwe Aßmann completed my master's thesis in error modelling in Context-Aware Systems. The proposed solution qualifies the sensed data and creates an inference rule mechanism to detect errors.

Centro Federal de Educação Tecnológica Celso Suckow da Fonseca - CEFET/RJ

RIO DE JANEIRO (RJ), BRAZIL

### Bachelor, Internet Systems

2007 – 2011

Completed major in Internet Systems with emphasis on online systems. Also managed the network infrastructure of the faculty. Under the guidance of Prof. Dr. Eduardo Bezerra completed my bachelor's thesis in finding correlation among stocks. The proposed work found a similar behavior among stocks using machine learning algorithms.

---

## Awards

Centro Federal de Educação Tecnológica Celso Suckow da Fonseca - CEFET/RJ

RIO DE JANEIRO (RJ), BRAZIL

### Academic Honor

2011

Rewarded with the highest student award for academic excellence from my university.

---

## Projects

### Textual Role Modeling Language (TRoML)

The Textual Role Modelling Language (TRoML) is a simple textual modelling language to create instances of the CROM metamodel. The Compartment Role Object Metamodel (CROM) is a comprehensive model for role-based modelling and programming languages. In this project I developed the domain specific language for CROM in TRoML using Xtext. It was developed during my internship at the *Software Technology Group* in the *TU Dresden*.

---

## Skills

**Technical specialties:** Solid understanding in Java and related technologies (Spring, JPA, EJB, GWT). Good understanding in Python, C/C++ and Ruby. Advance knowledge of web technologies: HTML5, CSS3, JavaScript(jQuery). Version control systems: Mercurial, Subversion and Git. Database systems: PostgreSQL, MySQL, Redis. Linux administration: zsh, Apache, nginx, orchestration (Ansible and Chef), continuous integration (Jenkins), IPSec, Nagios, Icinga, firewall (pfSense), samba, dhcp. Communication protocols: SNMP. Windows Server administration: ISA Server, Active Directory, Exchange Server.

**Natural languages:** Portuguese (*mother tongue*), English (*full professional proficiency*), German (*limited proficiency*).

---

## Interests

**Non-exhaustive and in no specific order:** Programming, Data Visualization, Cinema, Electronics, Open Source, Board Games, Card Games, Hardware Hacking, Brazilian Jiu-Jitsu, Travel and Cooking.
